

# L'alimentazione del bambino nei primi mesi di vita I Biberon

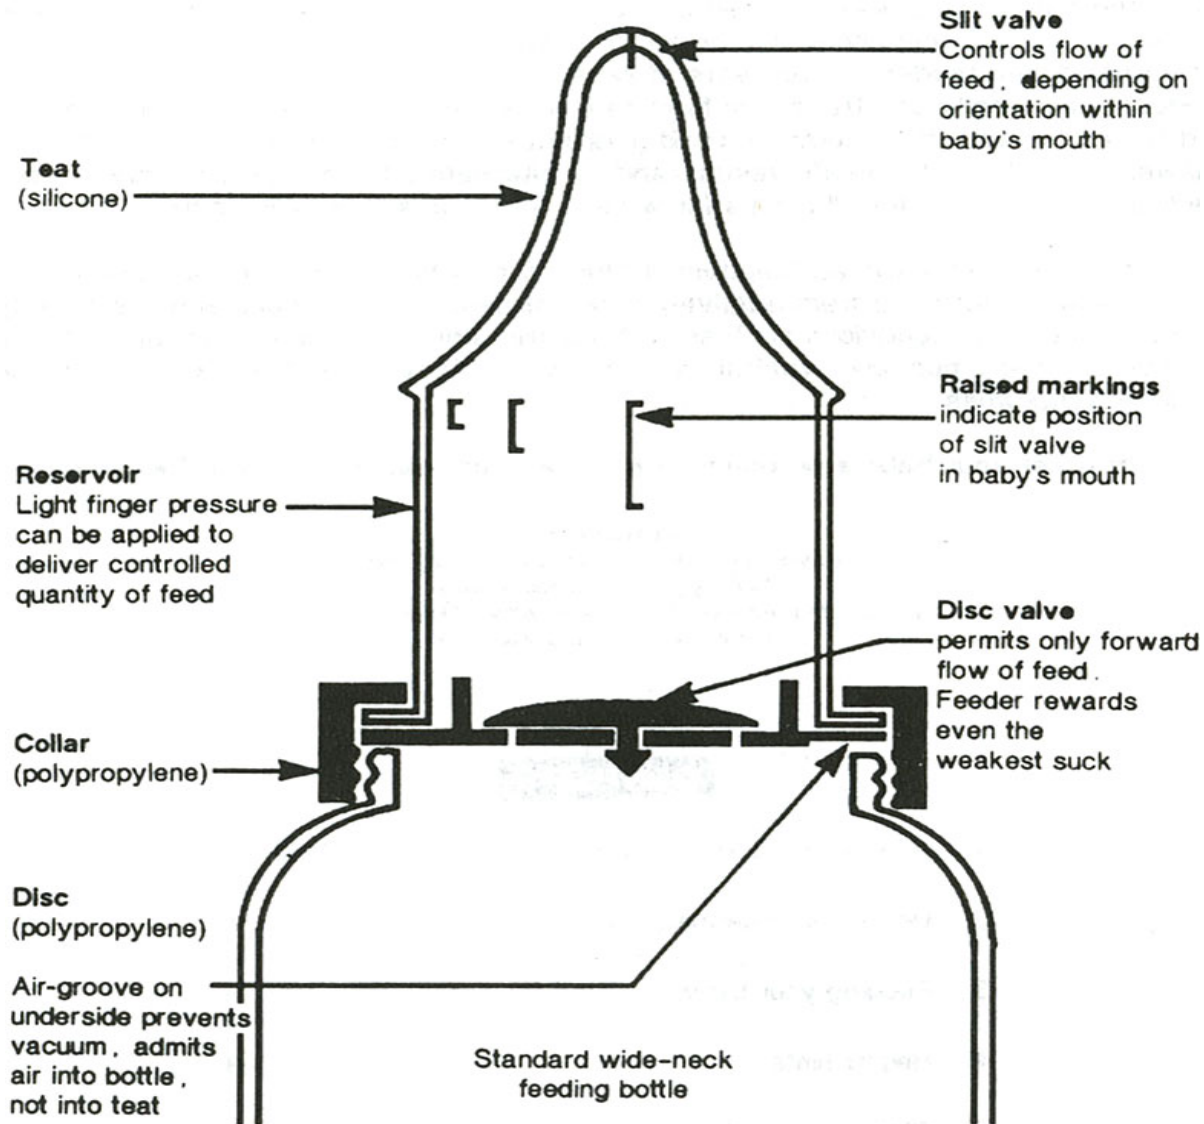

# Fase 1°

- Primi giorni (prima della Lip Adhesion)

Haberman Feeder

# THE HABERMAN FEEDER

## The Haberman feeder - How it works

## Consigli per l'alimentazione:

- 1) Mantenere il bambino in una posizione elevata con un angolo di circa  $45^\circ$
- 2) La poppata non dovrebbe superare i 30 minuti per 50-75 ml
- 3) Il bambino tende a buttare giu' molto aria durante le poppate, fare uscire l'aria di frequente (ruttino)
- 4) Se utile aumentare da 6 a 8 il numero delle poppate

Fase 2°

Dopo la lip adhesion

# Pigeon Bottle

Fase 3°

Post operatorio

- Facile da usare
- Valvola anti reflusso che permette un completo controllo del gettito
- Catetere in silicone che distrugge i punti di sutura
- Riduce il dolore da pressione che la suzione può creare nel post operatorio e incoraggio l'alimentazione
- Senza latex
- Bottiglia graduata e facile da misurare
